## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q8

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

A bank generates secure codes using 3-digit numbers where each digit is unique, and the code must be divisible by 3. You are tasked with generating the first N such codes based on user input, ensuring the digits are unique and the number is divisible by 3.

Note: Use nested for loops to solve.

##### ***Input Format***

The first line contains an integer N representing the number of valid codes to generate.

##### ***Output Format***

The output prints N lines, each line contains a valid 3-digit code.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 5

Output: 102

105

108

120

123

### ***Answer***

```
import java.util.Scanner;
```

```
public class Main {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
        int N = scanner.nextInt();  
        int count = 0;  
        for (int i = 1; i <= 9; i++) {  
            for (int j = 0; j <= 9; j++) {  
                for (int k = 0; k <= 9; k++) {  
  
                    if (i != j && j != k && i != k) {  
                        int num = i * 100 + j * 10 + k;  
                        if (num % 3 == 0) {  
                            System.out.println(num);  
                            count++;  
                            if (count == N) {  
                                return;  
                            }  
                        }  
                    }  
                }  
            }  
        }  
        scanner.close();  
    }  
}
```

**Status : Correct**

**Marks : 10/10**
